INSTRUCTIONS AND REPAIR PART LIST

FOR

SERIES 48N NON-REVERSIBLE

and

SERIES 48R REVERSIBLE

MULTI-VANE GEARED MOTORS

Form 6203
First Edition
April, 1972

LUBRICATION

We recommend using No. NFLU-8 (½" pipe tap inlet) Filter-Lubricator Unit with these motors. Install the Unit as close to the Motor as practical and regulate it to produce a slight oil mist in the exhaust. **Keep** the Lubricator filled with Ingersoll-Rand Pneu-Lube Medium Oil No. 50 or a good grade SAE 20 or 20W motor oil.

Note: If a sight feed lubricator is used, adjust the lubricator to feed 60 drops per minute for continuous duty operation.

Whenever the power unit is disassembled, work some Ingersoll-Rand Light Grease No. 28 or a good quality No. 2 Cup Grease into the Rear Rotor Bearing (11).

Use a good quality SAE 90 Gear Lubricant in the gear box. The amount of lubricant required is dependent upon the size of the gear box and the mounting position of the Motor. Series 48NA and 48RA Motors have the small gear box and require approximately three fluid ounces. Series 48NB and 48RB Motors have the large gear box and require approximately eight fluid ounces.

When lubricating the gear box, refer to the illustration showing the various mounting positions and the fill plugs, vent plug and drain plug. In each case, fill the gear chamber up to the "Level" plug. If the Vent Plug (49) is not located at the position indicated for a given mounting, relocate the Vent Plug by interchanging it with the pipe plug at that location.

Whenever a Series 48NB or 48RB Motor is mounted with the Motor Shaft (45) pointing toward the floor or ceiling, you must install a gravity feed lubrication to make certain the gears in the upper portion of the gear box get adequate lubrication. To do this, remove one of the pipe plugs **other than the Vent Plug** from the upper side of the motor and connect an oil line from a gravity feed reservoir. Connect an overflow line to the Level Plug opening and run it to a pump to return the lubricant to the gravity feed reservoir.

If the Motor is mounted in any position other than that illustrated, contact an Ingersoll-Rand Representative for oil level and venting recommendations.

OPERATION

For top performance and maximum durability of parts, operate these Motors on 90 psi of clean, dry air at the Motor. Use ¾" hose.

When installing one of these Motors, refer to the schematic diagram on Page 3.

DIRECTION OF SHAFT ROTATION

Series 48N Non-Reversible Motors are assembled at the factory so that the Motor Shaft (45) rotates **counterclockwise** when facing the end of the Shaft. When desired, the direction of the shaft rotation can be changed as follows:

1. Unscrew the Motor Mounting Screws (25) and remove the power unit from the gear box.

(Continued on Page 7)

HOW TO ORDER

Order all repair parts for your Ingersoll-Rand Tool by the **NAME** and **NUMBER** shown in the Repair Part List section. **Never** use the illustration numbers which appear in the first column.

For prompt service and genuine I-R parts, place orders with the nearest Ingersoll-Rand Branch Office.

Notice: The use of other than genuine Ingersoll-Rand replacement parts may result in decreased tool performance and increased maintenance, and may, at the Company's option, invalidate all warranties.

Refer All Communications to the Nearest
Ingersoll-Rand Branch Office or Distributor.

Lubrication Diagram

IMPORTANT: When these motors are used on applications requiring a reversible motor, a 4-way throttle valve or two 3-way throttle valves must be used in the air supply line in accordance with the following schematic diagram. When the

application requires a non-reversible motor, a 2-way inline valve can be used in the air supply line. In either case, the inlet and outlet of the valve must be equal in size, and preferably one size larger, than the inlet of the motor.

TWO THREE-WAY VALVES FOR CONTROLLING FORWARD AND REVERSE OPERATION OF MOTOR

7/8" diameter	48NA-757-7
Motor Shaft Key	
for 5/8", 3/4" and 7/8" diameter Shafts	J5-754
for 1-1/8" diameter Shaft	MOV050AA-754
for 1-3/8" diameter Shaft	MOV075AA-754
Mounting Flange	
9" diameter	48NA-580-1
10" diameter	48NA-580-2
11" diameter	48NA-580-3
14" diameter	48NA-580-4
Mounting Flange Cap Screw (6)	D10-312A
3/4" Lock Washer (6)	D02-321

★ For identification purposes, these Motor Shafts are stamped on their outboard end with the last digit of the part number.

2. Grasp the pinion end of the Rotor (16) and pull the Multi-Vane motor from the Motor Housing (10).
3. Hold the motor in an upright position, and grasp the pinion end of the Rotor in copper-covered vise jaws.
4. Remove the Rear Rotor Bearing Retainer (12) and withdraw the Rear End Plate (13) and Rear Rotor Bearing (11).
5. Lift off the Cylinder (14), turn it end for end, and replace it over the Rotor.
6. Install the Rear End Plate, Bearing and Retainer.
7. Slide the motor in the Motor Housing and replace the power unit on the gear box.
8. Remove the Back Head Cap Screws (2) and rotate the Back Head (1) and Back Head Gasket (4) 120° so that the cavity in the face of the Back Head is aligned with the alternate set of ports in the rear face of the Motor Housing. When the Back Head is correctly installed, the cavity will be over the letter "F" for counterclockwise shaft rotation (when facing the end of the Motor Shaft) and over the letter "R" for clockwise rotation.

The rotational direction of an assembled 48N Non-Reversible Motor can be determined by looking through the tapped opening to see whether the letter "F" or "R" is visible.

Install the Back Head on a Series 48R Reversible Motor so that each cavity in the Back Head is aligned with a group of three ports in the Motor Housing. The inlets in the Back Head of a Series 48R Reversible Motor are identified by the letter "F" or "R". When live air is admitted to the inlet marked "F", motor shaft rotation is counterclockwise when facing the end of the shaft. When live air is admitted to the inlet marked "R", motor shaft rotation is clockwise when facing the end of the shaft.

REPAIR PARTS

To keep costly downtime to a minimum, it is desirable to have on hand certain repair parts. To guide you in the stocking of repair parts, the Illustration Numbers of the Repair Part List are coded to indicate certain parts and quantities we recommend you carry in stock. Codings for the recommended repair parts are:

- One repair part for every four tools in service.
- + One repair part for every two tools in service.
- x One repair part for each tool in service.

If the tools are being used in remote geographical areas, or are subject to unusually severe service, the items and quantities should be increased. Contact the nearest Ingersoll-Rand Company Branch for recommendations.
